

simple_Nmap

This script has been coded by Dhrubajyoti Dey. This script is mainly for those people who don't like to type too much commands while using Nmap, and also for those people who want to save some time.

It has been coded in bash.

What is Nmap?

Nmap (Network Mapper) is a security scanner, originally written by Gordon Lyon (also known by his pseudonym Fyodor Vaskovich), used to discover hosts and services on a computer network, thus building a "map" of the network.
